

MAGIC

 **Saeco**

Coffee *and* Style

Magic represents the latest evolution of coffee machines from Saeco Professional. But it is also a machine that marks a clear break with the past.

It has new shapes, completely redesigned, and performance at the top of its category in terms of quality and variety of beverages.

The coffee break becomes from a daily gesture "a way of life" to be lived with style and taste, a moment of true relaxation to pamper yourself while savouring your favourite drink.

MAGIC

Details *that* matter

Sophisticated details make Magic a desirable 'must have' for any high-level office.

It is a machine that, for those who love coffee as much as we do, can give you pleasant moments of well-being. A machine that, when not working, becomes a decorative accessory to be exhibited, with a modern and innovative design that enriches any working space.

With Magic, Saeco introduces a new and innovative family of machines that offers advanced performance, combined with modern features and a high level of design.

Verywiderange

Elegant and ergonomic aesthetics, enhanced by stylish details such as LED lights and contrasting glossy and matt finishes.

The heart of Magic is a professional variable chamber unit able to hold from 8.5 to 15g of coffee. The amount of coffee dosed can be adjusted automatically via the menu. The unit has steel conical burrs, which can also be adjusted to obtain your favourite grind setting.

Magic features a new milk frothing system where the milk frother is built into the coffee dispenser. Extremely silent, it emulsifies creamy froth but can also prepare beverages with simple hot milk.

The milk circuit is equipped with a patented cleaning system that guarantees the best efficiency after each preparation.

The 7" colour touch screen provides an easy way to navigate through the menus and a broad range of beverages. The available options also include flat white and double cappuccino, while the beverage recipes can be fully customised to suit your personal taste.

The coffee, milk and water dispensers are installed in a single unit. This makes it easier to position the cups and adjust them in height (from 75 to 160mm), allowing different kinds of container to be used.
